[illegible]

Diagram showing the connection of UART pins from a microcontroller to an AMBE vocoder. The connections are organized into four sections, each corresponding to a different UART interface (A, B, C, D).

Section A:

- FTDLA_TXDD → AMBE_UART_RX
- FTDLA_RXD → AMBE_UART_TX
- FTDLA_DTRD → AMBE_UART_DTR
- FTDLA_CTS → AMBE_UART_RTS
- CLK_A → AMBE_CLK_IN

File: ambe-vocoder.kicad_sch
AMBE-3000R-B

Section B:

- FTDL_B_TXD → AMBE_UART_RX
- FTDL_B_RXD → AMBE_UART_TX
- FTDL_B_DTR → AMBE_UART_DTR
- FTDL_B_CTS → AMBE_UART_RTS
- CLK_B → AMBE_CLK_IN

File: ambe-vocoder.kicad_sch
AMBE-3000R-C

Section C:

- FTDL_C_TXD → AMBE_UART_RX
- FTDL_C_RXD → AMBE_UART_TX
- FTDL_C_DTR → AMBE_UART_DTR
- FTDL_C_CTS → AMBE_UART_RTS
- CLK_C → AMBE_CLK_IN

File: ambe-vocoder.kicad_sch
AMBE-3000R-D

Section D:

- FTDL_D_TXD → AMBE_UART_RX
- FTDL_D_RXD → AMBE_UART_TX
- FTDL_D_DTR → AMBE_UART_DTR
- FTDL_D_CTS → AMBE_UART_RTS
- CLK_D → AMBE_CLK_IN

AMBE-3000R: 3.5 Power Sequencing Requirements
 Enable power to all 3.3V supply pins and then ramp 1.8V supply pins.
 1.8V should not reach 0.3V until VDDIO has reached 2.5V.
 This ensures the reset signal from the I/O pin has propagated through the I/O buffer to provide power-on reset to all the modules inside the device.

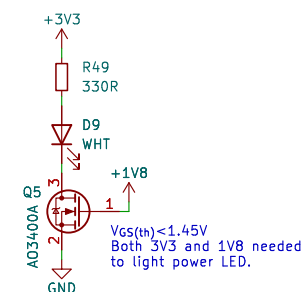

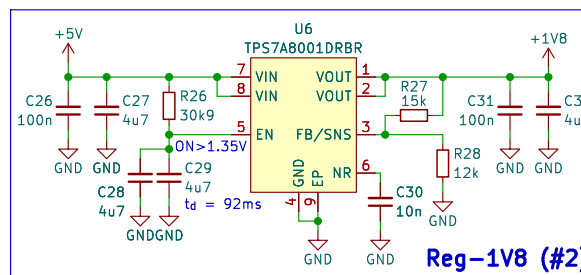

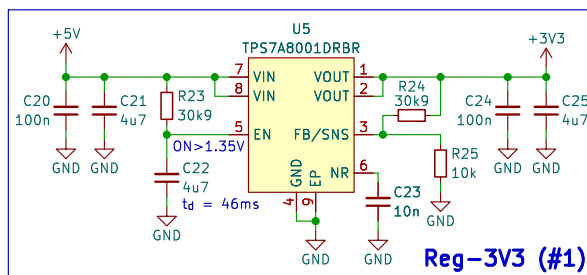

AMBE-3000R Maximum Current Values
 1.8V: 193 mW => 108mA (432mA for 4)
 3.3V: 171 mW => 52mA (208mA for 4)

FTDI FT4232HL Maximum Current Values
 1.8V: => 70mA
 3.3V: => 60+10mA

LDO Power Diss (5.1V direct)
 $((5.1V - 1.8V) * 432mA) => 1426mW$
 $((5.1V - 3.3V) * 208mA) => 375mW$

LDO Power Diss (5.1V -> 3.3V -> 1.8V)
 $((5.1V - 3.3V) * (208mA + 432mA)) => 1152mW$
 $((3.3V - 1.8V) * 432mA) => 648mW$

Total Copper Area for Both: ~ 50mm²
